

ATM Express, Inc. Broadband Internet ATM Solution

ATM Express, Inc. is now processing ATM transactions via high-speed internet for any dial-up ATM. This cost-efficient approach eliminates the need for a dedicated telephone line. A conversion box plugs into the ATM and utilizes broadband internet technology to quickly complete transactions for less than \$200.

How does it work? An ATM owner can purchase a conversion box for under \$200 to utilize at any location with a dial-up ATM machine and a broadband internet connection. The box connects to both the ATM machine and the broadband internet, acting as a secure and speedy hub for data transfer. The machine is now set up to convert transactions to a Secure Socket Layer (SSL), a secure path for transfer of confidential information such as PIN numbers. Data transmits over the Network to complete the transaction.

ATM Express is tapping in to the latest technology to offer new ATM solutions. They see this as an exceptional value to ATM owners looking to reduce budget expenses.

FEATURES

- SSL 3.0 128-bit encryption

BENEFITS

- Eliminate dedicated dial lines for ATM's
- Reduction in recurring phone lines costs
- Lower capital expense by continuing to use existing equipment
