

Gateway C21 SSL Router

Connect dial-only devices to a high-speed Ethernet Network with SSL Security

The Gateway C21 provides a standard telephone interface to enable payment terminals with built-in modems to establish secure SSL connections to a payment host. These connections are created over IP rather than over a normal dial line. Designed for use with terminals with integrated dial-up modems, the C21 provides secure and speedy communication of transaction data.

The unit's low price point and advanced features provides a simple solution that can be deployed in a variety of network environments. The C21 provides all of the processing capabilities needed to interface terminal devices to the processor.

Features

The C21 provides the following ports and software:

- One 10BaseT Ethernet port
- One Async Dial-Tone port
- SSL 3.0 128-bit encryption
- DHCP Client
- Web based configuration and management

Benefits

- Tremendous improvements in transaction speeds
- Eliminate dedicated dial lines for POS terminals and ATM's
- Works on any dial-up ATM
- Consolidation of parallel circuits
- Reduction in recurring phone lines costs
- Lower capital expense by continuing to use existing equipment
- No need to retrain employees on new equipment
- Quick and easy to install
- Seamless installation to existing systems and equipment
- Facilitate remote management
